

## Cloud WAN

Telecommunications connectivity is an important factor for your business. The need for capacity and access has traditionally been driven by voice requirements with Internet being a secondary element. Today there is a fundamental shift as businesses leverage the benefits of cloud-based services, collaborative environments, Voice over IP, and other broadband solutions - all of which increase a company's need for reliable network connectivity.

Syringa Networks Cloud WAN service is a managed SD-WAN solution that allows businesses to connect remote offices using public broadband with seamless connectivity into our regional MPLS network.

### Why choose a Syringa Networks managed SD-WAN?

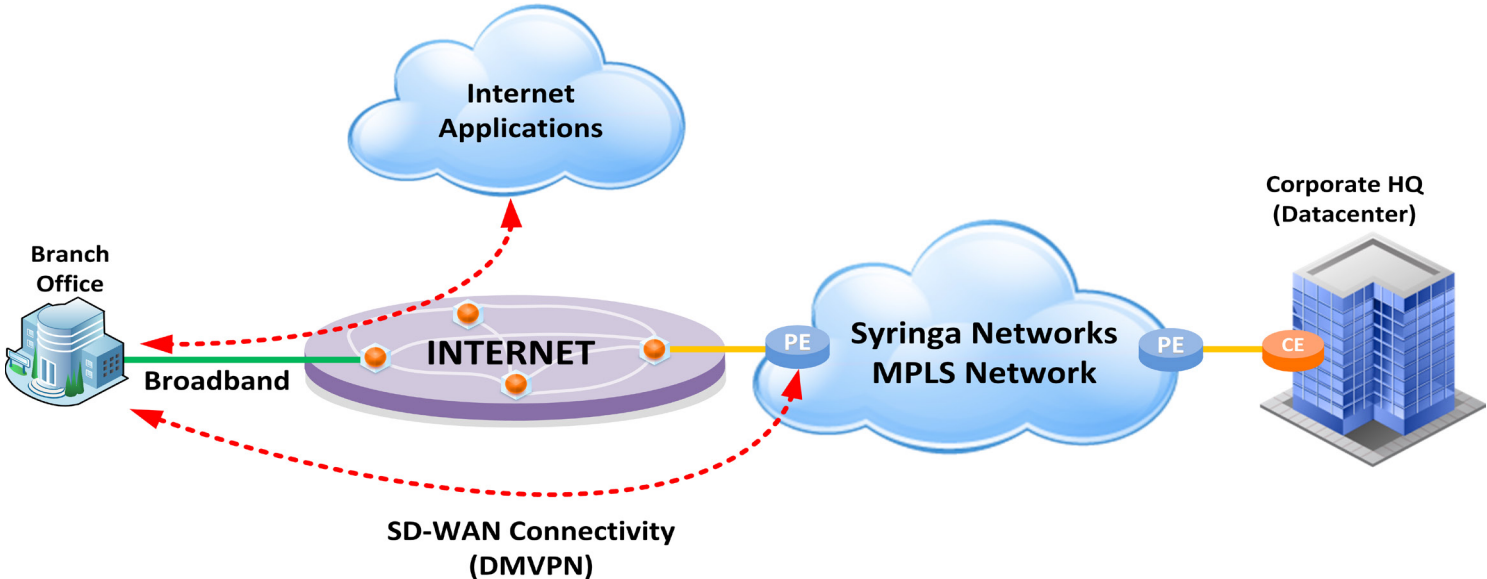

- **Managed SD-WAN:** With our Cloud WAN service, Syringa Networks fully manages your SD-WAN solution and provides you with a complete finished and monitored service.
- **Public Broadband:** Syringa Networks utilizes broadband connectivity options from multiple national, regional and local service providers including cellular LTE connections. This allows the customer to choose the best broadband connectivity option available.
- **DMVPN:** Our SD-WAN solution uses Dynamic Multi-point Virtual Private Networking (DMVPN) tunnels that keeps customer traffic and routing isolated and protected during transport across the public Internet.
- **Direct MPLS Connectivity:** Cloud WAN allows remote SD-WAN sites to connect directly into our MPLS network. The DMVPN tunnel originating from the remote location is seamlessly injected into our MPLS network and delivered to the customer head-end MPLS router.
- **Carrier-Class Hardware:** Syringa Networks Cloud WAN service is built upon carrier-class ISR routing infrastructure from Cisco Systems, the foremost provider of next-generation IP networking devices.
- **Managed Firewall:** A standard firewall service is included at the remote location that is managed by Syringa Networks using Cisco ISR routers. |

# Cloud WAN Overview

- |  |  |

## Cloud WAN Split Tunneling

### Reliable and Scalable

Syringa Networks Cloud WAN service provides your company with reliable and scalable connectivity options which improve your ability to leverage broadband applications and to operate more cost effectively. With a managed SD-WAN service, you can enjoy the cost savings of broadband, without all the headaches - no hassles with setting up and managing your own SD-WAN service. Cloud WAN is also an excellent choice for providing redundant backup circuits for your critical locations.

### Unmatched Service

Syringa Networks provides your business with more than a connection to the Internet - we are a trusted partner that works with you to develop a customized solution to meet the needs of your business. We provide your business with the added security of a 24x7x365 Network Surveillance Center and a 24x7 live-answer support center.
