

Co-location Services

Description

Syringa Networks Co-Location services provide customers reliable secure storage facilities for disaster recovery and centralized data processing. We can get data safe, secure and offsite, without capitalizing any new IT assets that customers have to manage, maintain and depreciate. Our co-location services connect directly to our network infrastructure that offers superior redundancy and self-healing circuitry that will eliminate costly system downtime. Syringa Networks has co-location facilities in Hailey and Idaho Falls, ID.

Co-location advantages

- Better managed IT assets to focus on core business
- Eliminates costly downtime
- Reduction of traffic back-haul costs to free up internal networks for other uses
- Business continuity

Reliability

- Reliable backbone based on Self Healing SONET and DWDM technologies
- Reduced response times
- Centralized data processing and storage
- 24x7x365 network management and support

Lower overall network costs

- Allows customers to interconnect to a variety of telecommunications and other services with minimum cost and complexity
- Reduction of traffic back-haul costs to free up internal networks for other use

On Disaster Recovery

93 percent of businesses that suffer more than 10 days of system downtime a year will file for bankruptcy within a year.

-National Archives and Records Administration, Washington

Of companies that had a major loss of business data, 43% never reopen, 51% close within two years, and only 6% will survive long-term.

-Hoffer, Jim. "Backing Up Business - Industry Trend or Event."
Health Management Technology, Jan 2001

Syringa Networks provides advanced telecommunication and rural broadband solutions that enable businesses to reach beyond traditional regional boundaries.
