

Description

Syringa Networks Frame Relay Service combines the most flexible and efficient WAN technology platform layered on the Syringa SONET Network covering southern Idaho. Syringa Networks' data transport methods are ideal for connecting remote offices without having to plan, build, or maintain your own network. Syringa Networks is the only alternative provider offering Frame Relay Service between the majority of southern Idaho's cities and towns.

Features and Benefits

Syringa Networks is owned by twelve Idaho local exchange carriers and is intimately familiar with provisioning circuits in Idaho; in fact, it's all we do.

We know Idaho networking.

Frame Relay Service

Reduced costs

- Fewer local loops - more applications can share loop
- Eliminates need for large-scale routers or multiplexers
- Application independence
- Migration path for future technologies

Flexibility for changing business needs

- Network integration of voice, video, data
- Flexible access speeds from T-1 to DS-3
- Unlimited PVC's
- Ability to quickly adjust bandwidth
- Easy migration from SNA to local area network
- (LAN)-based environment
- Eases addition of remote sites; scalable
- Ability to incrementally phase in changes

Reliability - Low Latency

- Higher throughput with greater reliability and improved application response time

Migration

- Easy to provision and install
- Ability to incrementally phase in changes
- Simple transition to ATM as needs grow

Lower overall network costs

- Increased network performance
- Reduced response times
- Multi-protocol support (SNA, TCP/IP, IPX, SDLC)
- Automatic network re-routing for circuit redundancy
- Generous burst policy

Leading-edge network

- Industry-leading fast-packet services at an outstanding value
- True multi-services
- Frame Relay and ATM on a single switching architecture

Interoperability

- One "pure-play" switching platform for Frame Relay Service and ATM Service allowing a mix and match of services
