

Microsoft Teams Enterprise Voice Solution

For businesses to thrive, a unified voice solution that allows mobility and collaboration is key. Our Enterprise Voice for Teams (EV-T) solution provides all the traditional phone features you are accustomed to, plus the benefits of a mobile VoIP solution integrated into your Microsoft Teams Client.

Transform Your Legacy Phone System

Switching to EV-T with Microsoft Teams replaces your legacy phone system saving you the costs associated with equipment, software, and maintenance. Syringa Networks EV-T solution gives your business full PBX voice calling capabilities using Teams. Syringa Networks EV-T connects to the Microsoft cloud, establishing a Public Switched Telephone Network (PSTN) connection directly to your Microsoft Teams client. Users can then make and receive external phone calls on any Teams enabled device.

Teams Certified Session Border Controller

We are proud to be a certified Microsoft carrier and operate a certified SBC platform as part of our Enterprise Voice Services Network. The result is a voice platform that supports your mission critical voice services and will deliver the results you need to seamlessly operate your business.

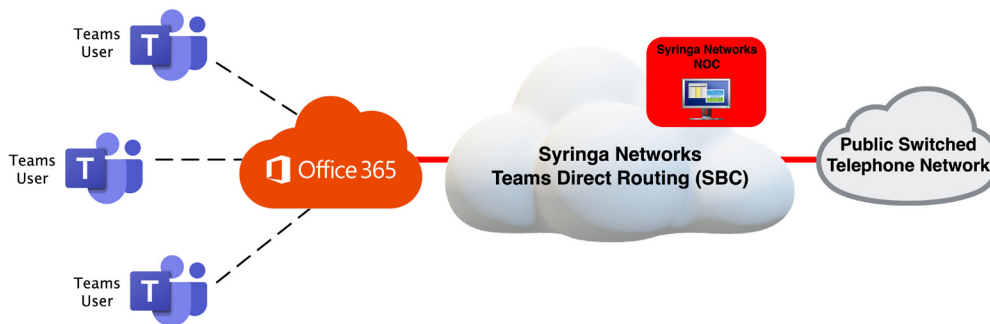

Our Network, Your Success.

Benefits of Enterprise Voice Teams

- Easily make, receive, and transfer calls from the Teams application.
- Enhances the collaborative features of Microsoft Teams.
- Eliminates reliance on on-site hardware such as PBXs and handsets, reducing additional costs.
- Provides resilience as EV-T is an all cloud-based service with direct routing into Microsoft's cloud.
- Access to Syringa Networks' flexible calling plans instead of limited calling plans provided by the Microsoft Phone System.
- Cloud-based Session Border Controller (SBC) hosted by Syringa Networks, enabling Teams to connect to the Public Switched Telephone Network (PSTN).
- Live U.S.-based customer service from our 24/7/365 Network Operations Center.

A Partner You Can Trust

Syringa Networks provides your business with more than a connection to the Internet — we are a trusted partner that works with you to develop a customized solution for your business needs. We provide added security of a 24/7/365 Network Operations Center and live U.S.-based customer support.
